THIS IS THE README FOR THE IMAGES FOLDER

This folder contains 4 test images which the model can be tested on. The images are grouped in two

pairs - Query and Reference, and they must be passed in that order through the verificationTool.py model.

The images are picked to test both Template Matching and Patch Matching methods.

image1Q.jpg + image1R.jpg - Designed to test the Template Matching

image2Q.jpg + image2R.jpg - Designed to test the Patch Matching

These images were picked randomly and are part of the two datasets used to test the model, as per the paper of this project.
